SITUATION

A long-time law firm client desired to open a second location. They wanted their staff to have the ability to access the same files and software, no matter which location they were at. Their software was not cloud based and they didn't want to change to a new product.

SOLUTION

The network engineers at Able Technology Partners LLC (ATP) proposed and implemented a terminal server environment that met all of the law firms' requirements and also improved performance on some of the older computers. This resulted in savings from not having to upgrade computers as often and not having to purchase as powerful computers since much of the computing happened on the server.

CASE SUMMARY

The network engineers at Able Technology Partners LLC (ATP) proposed and implemented a terminal server environment that met all of the law firms' requirements and also improved performance on some of the older computers. This resulted in savings from not having to upgrade computers as often and not having to purchase as powerful computers since much of the computing happened on the server.

BENEFITS

While attaining the short-term benefit of having employees work seamlessly between locations, they also save money in the long term due to less need to upgrade their workstation as often and the ability to go with less costly workstations when they do need to be replaced.

Customer Profile

Customer: Anonymous

Customer size: Small <100 employees
